## EDUCATION

### The Catholic University of America

*Bachelor of Science in Computer Science — GPA: 3.7*

Washington, D.C.

*May 2027*

## PROJECTS

### Cardinal Calendar | *Python, Flask, JavaScript, PostgreSQL, Git*

[GitHub](#)

- Led the backend development for an AI-powered academic planning web app that generates personalized semester schedules to help students plan upcoming semesters
- Engineered GPT-5 structured outputs using Pydantic schemas to enforce strict data extraction for user constraints, ensuring 100% type-safety between the LLM and the PostgreSQL database
- Developed an automated web scraper using Selenium to harvest 1200+ course records, normalizing unstructured data into a relational PostgreSQL schema
- Built a secure authentication system by implementing Bcrypt, utilizing hashing verification to safeguard account access for Cardinal Calendar

### FlowGoAI | *Python, Django, Django REST Framework, Git*

[GitHub](#)

- Architected a Django-based backend during a 24-hour hackathon to process uploaded audio files for transcription and summarization with AI
- Integrated AssemblyAI API to process audio files, storing results in Django models and managing data with serializers before sending it to the React frontend
- Developed RESTful API endpoints, file upload handling, and asynchronous transcription polling to support the React frontend
- Collaborated in a 3 person team using Git/GitHub for rapid iteration and debugging under time constraints

### KeyNotes | *Python, Django, JavaScript, HTML/CSS, Git*

[GitHub](#)

- Developed a full-stack note taking app during a 36-hour hackathon, automating the conversion of lecture note images into structured, digital study guides and notes with the integration of Gemini
- Architected a custom JavaScript MVC system to manage application state and UI rendering
- Built a file-upload system in Django that handles image processing and converts Gemini's raw AI output data into formatted study guides in markdown

### Oura Sleep Tracker Dashboard | *Python, Flask, JavaScript, HTML/CSS, PostgreSQL, Git*

[GitHub](#)

- Developed a personal sleep tracker dashboard that integrates the Oura Ring API to fetch and store biometric sleep data in a PostgreSQL database
- Developed RESTful API endpoints in Flask with dynamic query parameters to retrieve datasets, such as the last 7 days of sleep scores and REM cycles
- Implemented interactive sleep data visualizations using Chart.js to render real-time health trends and sleep efficiency metrics

## EXPERIENCE

### Center Store Member

*The Fresh Market*

March 2025 – Present

*Crofton, MD*

- Supervised receiving operations and inventory management across three departments to ensure optimal stock levels and product quality by efficiently stocking shelves and unloading merchandise from trucks

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, HTML/CSS, SQL, Bash

**Frameworks & Libraries:** Django, Flask, Pytest, Argparse, Selenium, Pydantic

**Developer Tools:** Git, PostgreSQL, Linux, Docker, Figma, Blender, Postman, OpenAI API, Gemini API, EC2

**Relevant Coursework:** Data Structures & Algorithms, Database Management, Cloud Computing, Web Design & Programming, Operating Systems, Object-Oriented Programming

## EXTRACURRICULAR ACTIVITIES

- **CUA Chess Club:** 1100 Elo (Rapid)
- **Brazilian Jiu-Jitsu:** Blue Belt
